Create an Assessment

The screenshot shows the Taleo Systems Training Internal web application. The interface includes a left-hand navigation menu with categories like Main, Sub LearnCenters, Appearance, Options, Integrations, Users, Tools, Support, and Assessments. The main content area is titled 'Assessments/Surveys' and features a 'Filters' section with search criteria for Name/Description, Catalog (set to LearnCenter), Category, and Type. Below the filters is a table listing seven assessments, all of which are of type 'Assessment' and associated with a 'LearnCenter' scope. The table has columns for Scope, Name, Type, and Actions. At the top right of the table area, there are links for 'Create Assessment' and 'Assessment Wizard', and a status indicator showing '295 results returned. Page 1 of 6'.

Create an Instance

Taleo Systems Training Internal

Instances

Definition: Instances can be defined as the administration rules governing the test as the learner completes the exam. The test, its respective questions and answers remain unaltered in any way, other than question and answer order for specified randomized testing.

Creating an Instance also creates a "snapshot" of the mapped assessment and all mapped questions and answers. Every time the instance is administered, the snapshot is utilized in displaying the questions and answers. Any subsequent changes made to any mapped question or answer will not be reflected unless you create a new Instance.
